Pipeline Summary

Total Findings Processed	150
Remediated Successfully	4
Failed Remediation	124
Requires Human Review	17
Discarded / Blocked	5
Success Rate	2.7%
Total Duration	5317.5s

LLM Usage (Aggregate)

Total LLM Calls	1064
Total Errors	0

Total LLM Duration	3624.3s
Prompt Tokens	6,480,153
Completion Tokens	794,042
Total Tokens	7,274,195
Estimated Cost (USD)	$1.0555

LLM Usage by Agent

Detailed Finding Reports

package_aide_installed: Install AIDE — SUCCESS

Rule	package_aide_installed
Severity	Medium
Description	The aide package can be installed with the following command: $ sudo dnf install aide
Recommendation	Remediation script: # Remediation is applicable only in certain platforms if rpm --quiet -q kernel-core; then if ! rpm -q --quiet "a
Host / OS	localhost / localhost.localdomain

Triage Decision

Should Remediate	✓
Human Review	✗
Risk Level	LOW
Reason	Installing the AIDE package only adds a file integrity checking tool; it does not modify authentication, networking, or critical sy
Estimated Impact	Potential package conflict if AIDE is already installed via another repository; Minimal disk space usage

Remediation (1 attempt(s))
