Pipeline Summary

Total Findings Processed	150
Remediated Successfully	37
Failed Remediation	22
Requires Human Review	87
Discarded / Blocked	4
Success Rate	24.7%
Total Duration	16838.1s

LLM Usage (Aggregate)

Total LLM Calls	1281
Total Errors	256

Total LLM Duration	16328.3s
Prompt Tokens	3,192,322
Completion Tokens	127,687
Total Tokens	3,320,009
Estimated Cost (USD)	$0.0000

LLM Usage by Agent

Commands	sysctl net.ipv4.conf.all.accept_source_route, grep -r 'net.ipv4.conf.all.accept_source_route' /etc/sysctl.d/ /run/sysctl.d/ /usr/loc
Scan Passed	✓
Success	✓
Duration	460.1s
Error	—

Review Verdict

Approved	✓
Optimal	✗
Security Score	7/10
Feedback	The plan would functionally resolve the vulnerability by ensuring net.ipv4.conf.all.accept_source_route is set to 0 both persist
Concerns	Does not address the possibility of existing conflicting configurations that need to be commented out; No verification step to c

QA Result

Safe	✓
Verdict	The remediation plan correctly addresses the vulnerability by ensuring net.ipv4.conf.all.accept_source_route is set to 0 both p
Side Effects	May add a new sysctl configuration file if none exists; Could potentially create duplicate entries if the parameter is already set
Regression	✗
Recommendation	Approve
